BATTING PRACTICE MATS

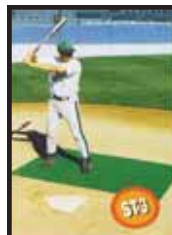

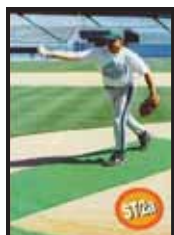

Artificial turf mats, **PREMIUM GRADE (SPIKE PROOF) 36 OZ. PILE**, 100% polypropylene with 5mm foam-rubber backing. These 3/4" thick padded mats **stand up to spikes**. Save time and labor. For ideal game conditions, moisten plate and mound areas before pre-game batting practice. Place mats on mound and home plate areas. After batting practice, remove mats to find areas tamped, level and moist for game-ready conditions.

HOME PLATE CIRCLE - ARTIFICIAL TURF HALO KITS

Made from **PREMIUM (SPIKE PROOF) 36 oz.** Artificial Turf. Pre-cut to fit a 13' radius from back point of home plate. Must be glued to concrete or asphalt. All seams are cut to fit like a puzzle. Only the outside edges get trimmed or tucked in dirt. Can usually be installed by grounds crew. Comes with or without a foam-rubber backing. Foam-rubber backing provides more cushioning but is somewhat more difficult to install. Kits come 5' or 10' deep, with or without wings.

SYNTHETIC TURF FOR BASEBALL & SOFTBALL

Ideal for batting tunnels, dugouts, bullpens, walkways, coaching boxes and locker rooms. 100% polypropylene, with 1mm rubber backing (for a firmer feel, especially for loose lay applications), 5mm foam-rubber backing (for a softer cushion), black unitary polyurethane backing. Can be installed outdoors or indoors on a compacted aggregate base or on concrete. Comes in 12' or 15" wide rolls. 10' minimum order length.

BASEBALL 36 PREMIUM (SPIKE PROOF) - 36 OZ. POLYPRO PILE

The same premium grade of spike proof turf that our batting practice mats are made of. Great for any use you may have without getting into stadium grade products. 36 oz. pile, 12' & 15' wide stock in spring green (lighter multi-shade green) or pine (darker solid green). 12' wide stock also available in 7 additional colors.

BASEBALL 42 PREMIUM (SPIKE PROOF) - 42 OZ. POLYPRO PILE

Needs 2-3 pounds of sand infill per square foot if not glued to concrete.

15' wide stock, pine or clay, 1mm rubber

\$3.55/SF

BASEBALL 36 with 5mm foam and **BASEBALL 42** with 1mm rubber backing have the same feel. **BASEBALL 42** is thicker not taller. Both provide excellent resistance to metal spikes.

PLEASE NOTE: Synthetic Turf is normally rolled face out. No charge to "reverse roll" cut pieces with turf faced in—which makes it easier to install—doesn't need to be flipped over.

There is a \$50 charge per piece to cut the width and/or pre-trim the scrim fabric along edge and reverse roll so that each piece will unroll with turf side up. For full rolls, there is a \$50 charge for pre-trimming & reverse rolling.

If gluing to concrete, use Henry's 663 glue from Home Depot if 65° or warmer, Turf Claw™ if 55°+, or Nordot 34-G if 50°+. If installing over compacted aggregate, you need to spike perimeter and tape (12" w) & glue seams. Turf Claw™ can be shipped with your turf order. Check current pricing for tape & glue per quantity needed. If installing over macadam, be sure glue is compatible with macadam or loose lay with 2-3 lbs. sand to weigh the turf down, plus tape & glue seams. If gluing unitary backing, make sure glue is polyurethane compatible.

For Batting Tunnels, all the above with foam backing are heavy enough to not be glued or spiked, but adding 2-3 lbs. sand per square foot is recommended for more weight to prevent shifting.

Blending polyethylene and polypropylene gives excellent durability and wear resistance. An ideal choice for batting tunnels and indoor facilities over concrete. Use of stance mats recommended for batting tunnels.

PLEASE NOTE: Synthetic Turf is normally rolled face out. No charge to "reverse roll" cut pieces with turf faced in—which makes it easier to install—doesn't need to be flipped over.

There is no charge to cut the length or reverse rolling, so that each piece will unroll with turf side up. **There is a \$50 per piece cutting charge** to cut the width, if necessary, and/or pre-trimming the scrim fabric along edge.

Cutting width: There is a 1/4" tolerance. You may be better to cut width on site with a utility knife, especially if there is any variation in width of batting cage.

If gluing to concrete, use Henry's 663 glue from Home Depot if 65° or more. For 55°+, use Turf Claw™ or Nordot 34-G. If installing over compacted aggregate, you need to spike perimeter and tape (12" w) & glue seams. Check current pricing for tape & glue per quantity needed. If installing over macadam, be sure glue is compatible with macadam or loose lay with 2-3 lbs. sand to weigh the turf down, plus tape & glue seams. BOCCE TURF™ - SYNTHETIC TURF FOR BOCCE COURTS

Can be installed over crushed aggregate base (3/4" minus) or glued to concrete or asphalt. Tape and glue needed for seams, if installing over crushed aggregate. 1/2" of fine stone dust recommended over crushed aggregate base for a smooth compacted surface. Permeable turf not recommended—can cause wash out in base. Perimeter drainage best—weep holes in frame if above ground at surface of turf, perimeter drains if below ground (3/4-1" plastic pipe at both sides of center line or at corners connected to drain will work. Foam backing recommended—helps lessen bounce and helps prevent dimples forming in the aggregate base. Scrim over foam backing recommended for glue down, without scrim over aggregate base (less curling). Turf (over aggregate base) can be nailed to pressure treated 2x4's installed vertically around perimeter and/or a bounce board can be added to frame to hold turf down to prevent edges from curling—up but not so tightly to prevent drainage unless there are weep holes.

Here are some guidelines for choosing turf:

Most Popular - Bocce 25 oz. Nylon and 24 oz. Polypro with shorter and denser fibers and 5mm foam backing are the most popular, followed by 36 oz. Polypro and 38 oz. Nylon.

Bounce - 5mm foam backing gives less bounce. 1mm rubber gives more bounce. Bounce has a lot to do with the face of the turf as well: more turf in the face (greater pile height and density) will cushion the bounce more. Adding round sand will decrease bounce. Adding angular or sub-angular sand will increase bounce.

Speed - 24 oz. Polypro is the fastest surface, followed by 36 oz. Polypro. Speed can be increased by adding either sand and adjusted on any except 24 oz. Polypro, which is too dense and short. Adding up to 2 lbs. sand per square foot allows you to get the speed and bounce you prefer.

Memory - Nylon turf DOES NOT have "memory" Polypropylene does. What this means is if you walk on Polypropylene turf every day for a year or more, eventually it will mat down. It "remembers" being mashed down and eventually doesn't come back up. However, Nylon turf will look the same after each use — it doesn't remember being mashed down and goes back to its original state after each use. However, this come with a price. Nylon is more expensive.

There is no charge to cut the length or reverse rolling, so that each piece will unroll with turf side up. **There is a \$50 per piece cutting charge** to cut the width, if necessary, and/or pre-trimming the scrim fabric along edge.

Cutting width: There is a 1/4" tolerance. You may be better to cut width on site with a utility knife, especially if there is any variation in width of court.

1 mm rubber backing does not expand or contract as much as other backings and is especially used for loose lay applications.

Scrim on foam backing keeps the foam from cracking when stored rolled up in warehouse.

Scrim will not curl if gluing down but will curl if installing over crushed aggregate without securing the perimeter.

Use foam back with scrim for gluing to concrete or macadam. Use foam without scrim for installing over crushed aggregate unless securing perimeter.

If gluing unitary backing, be sure glue is polyurethane compatible.

Henry's 663, NORDOT 34-G, and Turf Claw are polyurethane compatible but always double check the label to be sure.

INSTALLING BOCCE TURF™ ON CONCRETE

Floor Preparation

Concrete should be cured, clean and dry. Concrete shall be free of paint, dirt, grease, oil curing or parting agents, and other contaminants, including sealers, that may interfere with the bonding of the adhesive. Whenever a powdery or porous surface is encountered, a primer compatible with the adhesive shall be used to provide a suitable surface for the glue-down installation. Patching of cracks and depressions shall be made with an appropriate and compatible latex or polymer fortified patching compound. Do not exceed manufacturer's recommendations for patch thickness. Large patched areas must be primed.

Recommended Glues

Nordot 34G for 50°F and up. Buy direct from Synthetic Surfaces Inc. at 908-233-6803.

Turf Claw for 55°F and up available shipped with turf.

Henry's 663 Indoor/Outdoor for over 60°F available at Home Depot or Lowes.

Turf Installation

Unroll in place to be sure fit is correct.

Roll up section at one end and apply glue to concrete. Unroll over glue.

Roll up from other end. Apply glue to concrete. Unroll over glue.

Roll with 100 pound roller. Re-roll 5-6 hours later.

Cure times will vary and will be affected if overnight temperatures drop below 60°F.

Make sure glue has 24 hours to dry by covering with plastic if wet weather is projected within 24 hours.

General Maintenance

OUTDOOR USE

Sweep the synthetic turf as needed frequently with a broom to remove surface soil, and hose down occasionally with water. Do not use a rotary brush machine.

INDOOR USE

Vacuum the grass like carpeting as you would any other type of carpeting to pick up surface soil.

STAIN REMOVAL

Synthetic turf is resistant to stains. However, spills do occur, and the resulting stains should be removed as soon as possible. In most cases, they can be removed with either detergent suds or a solvent-based cleaning agent. Follow the **STAIN REMOVAL CHART** for specifics.

Stain Removal Chart

WATER-BORNE AND MISCELLANEOUS STAINS

Acid, Alcohol, Animal Urine, Alkali, Blood, Coffee, Tea, Cola, Soot, Chocolate, Dye, Glue, Fruit Juice, Ice Cream, Latex Paint, Milk, Mustard, Rust, Water Colors

REMEDY

Sponge with detergent suds and cold water. This method will be effective even after 24 hours. Note: It is important to use just enough fluid to irrigate solid particles out of fabric. Too much fluid will leave a "ring." Clean from outside of stain in toward center so as not to leave a ring.

PERSISTANT STAINS

Chewing Gum
Crayon
Nail Polish
Lipstick
Metal Polish
Furniture Stain
Tar
Oil Paints

REMEDY

Spray with Freon Aerosol and Scrape
Sponge with dry cleaning solvent
Sponge with acetone.
Sponge with dry cleaning solvent
Sponge with dry cleaning solvent
Sponge with dry cleaning solvent
Scrape Excess, Sponge with dry Cleaning Solvent
Blot Immediately, Sponge with turpentine or paint remover. Blot with detergent and water. Re-sponge with cold water to remove detergent

EMULSIFIED STAINS

Cosmetics, Ink, Shoe Polish

REMEDY

Sponge with detergent and cold water. Apply solvent. Clean solvent residue with soap and water. Re-sponge with cold water to remove detergent

Note: in some cases it may be necessary to repeat any of the above procedures to insure thorough cleaning
