**RECOMMENDATIONS FOR CONSTRUCTING BEAM CLAY® HORSESHOE PITS**

1. Make frame of 2 x 8's.
2. Place entire frame on 3-4" drainage bed of uniform sand, or 3/4" minus stone (with fines) covered with a 1/2" layer of uniform sand. Drainage bed should be larger than frame by at least one foot all around.  
**IMPORTANT** - Install drainage bed first with frame on top.
3. Apply 8" of **Beam Clay®** Horseshoe Pit Clay, 2" at a time, wetting and compacting each layer.
4. Two (6' x 6') boxes 8" deep require 2-1/2 tons (or 100 bags) of **Beam Clay®** Horseshoe Pit Clay.  
Two (3' x 4') boxes require 1,650 lbs. (or 33 bags).
5. For serious play, we recommend the **Red, Orange, Brown, or Grey** Extra Firm or Medium Firm grades. It is best to cover these when not in use — to keep excess moisture off from rain, yet keep moisture in when dry. When too hard & dry, these should be turned or dug up 4—6" deep and watered.

For most municipal and residential uses, we recommend the sandier **Soft Orange** grade, which does not need to be covered when not in use and is much easier to water if too dry.

**RECOMMENDATIONS FOR RESURFACING EXISTING HORSESHOE PITS WITH BEAM CLAY®**

If resurfacing an existing Horseshoe Pit clay surface, scarify surface approximately 1/2" in depth and incorporate 1/2" of **Beam Clay®** Horseshoe Pit Clay into that surface to form a bonding layer of the two materials. Then apply 2" of **Beam Clay®** Horseshoe Pit Clay, wetting and compacting as above.
