JET TRACK™ RUNNING TRACKS

Economical Alternatives to Synthetic, All-Weather Tracks for New Running Tracks or for Many Years Of Higher Performance from Your Existing Cinder Track!

Jet Track Mixes, which can be applied over your present cinder track, are quality controlled mixes, with natural clay or Stabilizer® Binder blended with 3/16" crushed aggregate, superior to coal cinders as they will not break down and become powdery.

Jet Track Mix makes a firm, smooth surface with great drainage. Available in burgundy red, grey, black, white or tan, with either 20% red, grey, black, white or tan **Beam Clay® Binder** for a smoother surface, or 5% red, grey, black, white or tan **Beam Clay® Binder** for a somewhat "crunchier" surface, or **"STABILIZED"** in red, grey, black, white or tan for a firmer, yet more resilient, surface – each with excellent drainage and resistance to erosion. Excellent natural surfaces for walking paths & jogging trails. Easy to maintain: Recommended maintenance is to scarify and roll each spring. Otherwise, drag mat as needed to maintain smooth surface. Recommended depth for a new track is 3"; for resurfacing a cinder track 1-3". Resurfacing a cinder track can be tapered with 3" on inside lanes out to 1" in outer lanes.

Stabilizer® binds the aggregate together for a firm, yet more resilient, natural running track surface requiring minimal maintenance.

3/16" Red, Grey, Black, White or Tan Jet Track™ with Natural Beam Clay® Binder

One cubic yard weighs approximately 2,700 lbs. in red, approximately 3,240 lbs. in grey, black white or tan, plus add 20% for compaction. Each 1" compacted requires approximately 5 tons per 1,000 square feet for red, 6 tons for grey, black, white or tan. Each 1" compacted over a 400 meter x 32' wide running track with starting area will require approximately 248 tons for red, 298 tons for grey, black, white or tan.

One cubic yard weighs approximately 2,700 lbs. in red, approximately 3,240 lbs. in grey, black, white or tan plus add 20% for compaction. Outdoor Track Aluminum Curbing

All Weather Track Aluminum Curbing

Aluminum track curbing is designed to save tremendous amounts of labor on installation, last for decades and provide continual functionality. Accurate measurements on-site or drawings required.

- \$ Structural aluminum tubing is pre-bent to reduce stress on track surface
- \$ Installation only requires from 12 to 24 holes in your track surface, while other systems require literally hundreds of holes to be drilled to keep curb sections in place under tension
- \$ Interlocking joints between 20' sections are precision machined for a snug fit requiring no hardware connectors - allows expansion and contraction for stability under all conditions
- \$ Welded aluminum drain pads raise curb 1/2" off the track surface and allow water and debris to run off freely
- \$ Mill finish is standard or upgrade to the silver anodized finish for extra durability

Our sharp multi-color images will outlast other processes. Eliminates the historic problems of digital printing, like weathering, premature fading, scuffing, and unsightly white mesh backside color. Images will last outdoors as long as the fabric, something rarely true with digital imprinting. Also highly spike, cleat, and racquet resistant. Our thick, individually-applied, double coating process literally bonds the image into the vinyl and completely masks the underlying fabric color, so image colors are vivid and true.

Chroma-Bond imprinting is available on our vinyl-surfaced windscreen, cover, padding & sign products.
